

NAME

psresize – rescales and centers a document for new output paper size

SYNOPSIS

psresize [-*wwidth*] [-*hheight*] [-*ppaper*] [-*Wwidth*] [-*Hheight*] [-*Ppaper*] [-*q*] [*infile*] [*outfile*]

DESCRIPTION

Psresize rescales and centres a document on a different size of paper. The input PostScript file should follow the Adobe Document Structuring Conventions.

The **-w** option gives the output paper width, and the **-h** option gives the output paper height, normally specified in **cm** or **in** to convert PostScript's points (1/72 of an inch) to centimeters or inches. The **-p** option can be used instead, to set the paper size; otherwise a default value is used. See **paper(1)**.

The **-W** option gives the input paper width, and the **-H** option gives the input paper height. The **-P** option can be used instead, to set the paper size; otherwise a default value is used. See **paper(1)**.

Psresize normally prints the page numbers of the pages output; the **-q** option suppresses this.

EXAMPLES

The following command can be used to convert a document on A4 size paper to letter size paper:

```
psresize -PA4 -pletter in.ps out.ps
```
